COUNTRY.REPORT--A Prompting Program for Accessing World Grain and Macroeconomic Data. Richard K. Matta, Trade Policy Branch, International Economics Division, Economic Research Service, U.S. Department of Agriculture, July 1981.
Staff Report No. AGESS810630.

Abstract

This report is an update of the June 1980 publication of the COUNTRY.REPORT programs. These programs are designed to access the ERS data bases and provide county reports containing grain supply/utilization and macroeconomic data. The program also now provides a time-trend/graphics option and a SPEAKEASY data-set creation option. Modifications have been made to increase processing speed and to allow program execution in batch. If you have any questions or comments on this program, contact William E. Kost or Richard K. Matta (202-447-8470).

Keywords: grain data, macroeconomic data, computer program, database, SPEAKEASY

TABLE OF CONTENTS

COUNTRY.REPORT: A Prompting Program for Accessing World Grain and Macroeconomic Data

by Richard K. Matta

This program is designed to access the ESCS database and provide a SPEAKEASY dataset, tabular output, or tables and graphs of selected IMF International Financial Statistics (IFS) macroeconomic and FAS grain supply/utilization data for individual countries and regions. Only a minimum of input is required from the user. Access to the program is through an interactive terminal. Output, however, may be directed to the high-speed line printers as a batch run. This is suggested for three or more countries.

To save turnaround time and decrease connection costs of interactive use, grain data is accessed through OASIS. When the program is to be executed interactively, a region size of at least 500 must be specified in the logon command. See example below:

```
ologon ers75 size(500)
```

This size parameter is not necessary to enter data for batch execution.

To access both the batch and interactive versions of the program, the user should enter the following command into the terminal after the logon procedure:

```
exec  'ers75.er3rm.country.report.clist'
```

The terminal will then ask whether the program is to be submitted in the batch mode or run interactively.

INTERACTIVE MODE

In this interactive version, the program enters OASIS after a brief initialization period. The user will then be prompted with the symbol ":__" and must enter a size command:

```
:__ size(200)
```

OASIS next prompts the user for his ersid (logon identification) and terminal type. After entering this information, the user should type the following line:

:__ get coreport on report; coreport

Any additional information requested by the terminal will be self-explanatory.

No more than 10 countries may be entered at a time in the interactive mode for historic or forecast output (and it is suggested that no more than three be entered). Only one country may be entered if the user wishes to save the data. If data sets are to be saved for more than one country, then each will have to be renamed or stored by the user before another country is entered. If this is not done, previously obtained variables will be written over and lost.

The list of codes and country names in the program is more complete than the countries reported in IFS, because it includes a number of countries and regions for which no macroeconomic data are available. The country names available, along with their IFS and OASIS codes, can be obtained within the program, and are reprinted in this report.

BATCH MODE

For entering more than three countries, or for less expensive processing, the batch mode is suggested. An interactive program prompts the user for the necessary information, then directs the execution to the high-speed printers in Room 190. The logon procedure is essentially identical to the interactive mode, except that a size parameter is not needed. The COUNTRY.REPORT program ('ers75.er3rm.country.report.clist') allows the user to choose either batch or interactive processing.

The program prompts for the following information:

1. Standard batch jobname of 8 characters. (6 characters required by WCC plus a suffix of the user's choosing).

2. 10 digit account number.

3. Remote terminal where output is to be directed (RMT3 or RMT13).

4. Priority: 1 -- weekend
   3 -- overnight
   13 -- ASAP

5. Job class: D - for most small jobs, up to 10 countries. F-when both historic and forecast data are specified, or for large jobs. I (instead of D) or N (instead of F) are required if xerox output is desired. See WCC handbook.

6. Id and Password to access grain data, available from World Analysis Branch. These correspond to the "OSF" logical group of TDAM.

In addition, a SPEAKEASY CHECKPOINT file is required, containing the following variables:

N = number of countries or regions

NAME = ARRAY (N, 3: " character array of IFS codes ")

COUNTRY = ARRAY (N, 30: " character array of country/region names ")

This file may be created by the user, or more easily through the program. The program prompts will be self-explanatory.

The program allows for xeroxed output. A separate request form for such output must be submitted to the terminal operator. The xerox request form can also be obtained from the terminal room operator. The job class must allow for the use of mountables (magnetic tape). See WCC handbook and above.

NOTE ON COSTS

Because of the OASIS core requirements and the amount of data which is required for execution, the program is not inexpensive to run, especially the interactive version. Thus it is suggested that the batch version be used

except when quick turnaround is desired or the user is going to save variables for later use. The advantage of the program, however, is that it saves even more costly programming time required to retrieve the data on an individual basis. Although actual costs depend on a number of factors and cannot be readily estimated, recent program runs (March, 1981) suggest that $15-20 should be expected for one country using the interactive version. Batch runs at priority 1 should cost approximately $4-8 for one country. Expect additional countries to add about 60% of these costs.

COUNTRY.REPORT
SAMPLE RUN

Creating a CHECKPOINT file

```
exec °ers75.er3rm.country.report.clist°
**** THANK YOU ERS75 FOR USING THE "COUNTRY REPORT" PROGRAM ****

     IF MORE THAN 3 COUNTRIES ARE BEING PRINTED, IT IS
     SUGGESTED THAT THE PROGRAM BE SUBMITTED BY BATCH.

     DO YOU WISH THIS TO BE A BATCH RUN? (Y OR N):y

*****************************************************************

DO YOU HAVE A SPEAKEASY CHECKPOINT CONTAINING A LIST OF
COUNTRIES, COUNTRY CODES, AND THE NUMBER OF COUNTRIES? (Y OR N):
n

DO YOU WISH TO CREATE A CHECKPOINT FILE? (Y OR N):
y

TO DO SO IS QUITE EASY.  SIMPLY ENTER UP TO 50 IFS OR
OASIS COUNTRY CODES, AND THE PROGRAM WILL DO THE REST.

BEGIN -- ENTER ONE OASIS OR IFS CODE PER LINE (THEY MAY BE
ENTERED INTERCHANGEABLY) -- TYPE STOP TO END:

COUNTRY.REPORT
SAMPLE RUN

BATCH MODE: HISTORIC AND FORECAST OUTPUT

NOTE: In the batch mode, the system design causes all graphs to be printed before any other output. They are printed out sequentially and can be easily matched to the proper headings.

```
exec °ers75.er3rm.batchpgm.clist°

DO YOU HAVE A SPEAKEASY CHECKPOINT CONTAINING A LIST OF
COUNTRIES, COUNTRY CODES, AND THE NUMBER OF COUNTRIES? (Y OR N):
y
PLEASE CHOOSE ONE OF THE FOLLOWING OPTIONS FOR OUTPUT:

**********************************************************

** HISTORIC DATA ** THIS IS THE DEFAULT ** ENTER °HIST°  **
**            MACROECONOMIC AND GRAIN DATA                **

** FORECAST DATA **  TABLES AND GRAPHS  ** ENTER °FORE°  **
**    PRODUCTION, CONSUMPTION, AND NET IMPORTS ONLY       **
** SIMPLE LINEAR AND DOUBLE-LOG PROJECTIONS FOR 5 YEARS  **

**   BOTH HISTORIC AND FORECAST DATA    ** ENTER °BOTH°  **

**********************************************************
PLEASE ENTER ONE OF THE ABOVE OPTIONS:
both

ENTER A STANDARD BATCH JOBNAME FOR THE BATCH
PRINTOUT (EXACTLY 8 CHARACTERS):
ers3rm03
ENTER YOUR 10 DIGIT ACCOUNT NUMBER:
[redacted]
ENTER THE REMOTE TERMINAL (RMT13 FOR ESCS OR RMT3 FOR FAS):
rmt13
IS THE OUTPUT TO BE ON XEROX? (Y OR N):
n

WHAT IS YOUR PRIORITY? (1 FOR WEEKEND, 3 FOR AVERAGE, 13 FOR ASAP)
*** NOTE THAT PRIORITY 13 COSTS 3 TIMES PRIORITY 3 ***
1
WHAT IS THE JOB CLASS? (USUALLY D FOR UP TO 10 COUNTRIES,
BUT SEE WCC HANDBOOK FOR OTHER CLASSES IF A LARGE NUMBER
OF COUNTRIES IS BEING SUBMITTED):
d

************************************************
JOBNAME=ERS3RM03 ACCOUNT=[redacted] ROUTE=RMT13
    FORM=1431 PRIORITY=1 CLASS=D
************************************************

IS THIS CORRECT? (Y OR N):
y
AN ID AND A PASSWORD ARE REQUIRED TO ACCESS GRAIN DATA.
(THESE CAN BE OBTAINED FROM ED OVERTON)

PLEASE ENTER ID:
[redacted]
OK, ENTER PASSWORD:
[redacted]
PLEASE ENTER THE NAME OF YOUR CHECKPOINT FILE
CONTAINING THE LIST OF COUNTRIES AND CODES:
testsave

COUNTRY.REPORT
SAMPLE RUN

INTERACTIVE MODE: SPEAKEASY DATA SET OUTPUT

```
READY
exec °ers75.er3rm.country.report.clist°
**** THANK YOU ERS75 FOR USING THE "COUNTRY REPORT" PROGRAM ****

     IF MORE THAN 3 COUNTRIES ARE BEING PRINTED, IT IS
     SUGGESTED THAT THE PROGRAM BE SUBMITTED BY BATCH.

     DO YOU WISH THIS TO BE A BATCH RUN? (Y OR N):n

*****************************************************************

     AFTER ENTERING OASIS, YOU MUST TYPE
     THE FOLLOWING LINE:

          SIZE(200)

     YOU WILL THEN BE ASKED FOR YOUR ERSID (ERS75) AND
     YOUR TERMINAL TYPE.  AFTERWARDS, TYPE THE FOLLOWING LINE:

         GET COREPORT ON REPORT;COREPORT

DO YOU WANT INFO (JUNE 6, 1980) ON OASIS  ?n

ENTER THE REMOTE PRINTER NUMBER (NN) IF JOURNAL
IS TO BE USED, OTHERWISE HIT CARRIAGE RETURN  †
TIME-09:22:11 AM. CPU-00:00:01 SERVICE-2228 SESSION-00:01:57 APRIL 7,1981

PLEASE BE PATIENT - IT SOMETIMES TAKES A FEW
SECONDS TO ALLOCATE FILES.

WELCOME TO  OASIS  -  THE USDA-ESCS OUTLOOK AND SITUATION INFORMATION SYST

*****************************************************************************
*** NOTICE TO OASIS USERS 4/6/81 ***

1980 ANNUAL LIVESTOCK AND MACRO DATA ARE NOW AVAILABLE IN LGF=OSSA.

  TELENET USERS, PLEASE REPORT ANY PROBLEMS (EG. LINE DROPS) TO THE
  TELENET SERVICE CENTER 800-336-0437.

   FOR FURTHER HELP CONTACT ED OVERTON OR FLETCHER MARTIN AT 202-447-8862.

TSO SPEAKEASY III NU+  9:29 AM APRIL 7, 1981
:_size(200)
ENTER YOUR ERSID BELOW:
ers75
ENTER YOUR TERMINAL TYPE BELOW:
aj832
:_get coreport on report;coreport
*****************************************************************

TO USE THIS PROGRAM, THE OPERATOR MUST KNOW THE
IFS COUNTRY CODES FOR THE COUNTRIES DESIRED.

A SUMMARY OF THE CODES IS AVAILABLE ON THE INSIDE COVER
OF °INTERNATIONAL FINANCIAL STATISTICS° OR BELOW.

*****************************************************************

IF MORE THAN 3 COUNTRIES ARE BEING PRINTED, IT IS
SUGGESTED THAT THE PROGRAM BE SUBMITTED BY BATCH.
```

```
************************************************************

TO INSURE THAT PRINTOUT IS READABLE, PLEASE ENTER MINI (80-155 CHARS/LINE)
OR STANDARD (155 CHARS/LINE) TERMINAL (M OR S):     s
DO YOU WISH TO SEE A LIST OF THE COUNTRIES AND THE
IFS CODES WHICH ARE AVAILABLE?(Y OR N):     n

************************************************************
PLEASE CHOOSE ONE OF THE FOLLOWING OPTIONS FOR OUTPUT:

** HISTORIC DATA ** THIS IS THE DEFAULT ** ENTER °HIST°  **
**            MACROECONOMIC AND GRAIN DATA                **

** FORECAST DATA **  TABLES AND GRAPHS  ** ENTER °FORE°  **
**    PRODUCTION,CONSUMPTION, AND NET IMPORTS ONLY        **
** SIMPLE LINEAR AND DOUBLE-LOG PROJECTIONS FOR 5 YEARS  **

**   BOTH HISTORIC AND FORECAST DATA    ** ENTER °BOTH°  **

** TO SAVE VARIABLES (ONE COUNTRY ONLY) ** ENTER °SAVE°  **
**      RETURNS HISTORIC VARIABLES FOR OPERATOR USE       **

************************************************************
PLEASE ENTER ONE OF THE ABOVE OPTIONS:     save

AN ID AND A PASSWORD ARE REQUIRED TO ACCESS GRAIN DATA
THESE MAY BE OBTAINED FROM ED OVERTON

ENTER THE ID NUMBER FOR GRAIN DATA; °QUIT° TO
END THIS SESSION; OR (RETURN) FOR
MACROECONOMIC DATA ONLY:                    [redacted]
ENTER PASSWORD:                [redacted]

ENTER A COUNTRY/REGION NAME:     australia

ENTER 3 DIGIT IFS CODE FOR THIS COUNTRY:    193

AUSTRALIA                        193

IS THIS CORRECT? (Y OR N)  y

USING D2IOR VERSION 08-01-79, 1100  (V3.01)
USING DATA FILE OF 03/26/81 AT 230247

COUNTRY.REPORT
SAMPLE RUN

INTERACTIVE MODE: FORECAST OUTPUT

NOTE: In the batch mode, the system design causes all graphs to be printed before any other output. They are printed out sequentially and can be easily matched to the proper headings.

```
exec er3rm.country.report.clist
**** THANK YOU ERS75 FOR USING THE "COUNTRY REPORT" PROGRAM ****

     IF MORE THAN 3 COUNTRIES ARE BEING PRINTED, IT IS
     SUGGESTED THAT THE PROGRAM BE SUBMITTED BY BATCH.

     DO YOU WISH THIS TO BE A BATCH RUN? (Y OR N):n

*****************************************************************

     AFTER ENTERING OASIS, YOU MUST TYPE
     THE FOLLOWING LINE:

          SIZE(200)

     YOU WILL THEN BE ASKED FOR YOUR ERSID (ERS75) AND
     YOUR TERMINAL TYPE.  AFTERWARDS, TYPE THE FOLLOWING LINE:

         GET COREPORT ON REPORT;COREPORT

DO YOU WANT INFO (JUNE 6, 1980) ON OASIS  ?n

ENTER THE REMOTE PRINTER NUMBER (NN) IF JOURNAL
IS TO BE USED, OTHERWISE HIT CARRIAGE RETURN  †
TIME-10:11:15 AM. CPU-00:00:27 SERVICE-59674 SESSION-00:33:48 APRIL 2,1981

PLEASE BE PATIENT - IT SOMETIMES TAKES A FEW
SECONDS TO ALLOCATE FILES.

WELCOME TO  OASIS  -  THE USDA-ESCS OUTLOOK AND SITUATION INFORMATION SYSTEM

*****************************************************************************
*** NOTICE TO OASIS USERS 3/4/81 ***

FOURTH QUARTER 1980 DATA IS NOW AVAILABLE IN LOGICAL GROUP OSSQ.

 OASIS PASSWORDS WILL BE CHANGED ON FRIDAY, MARCH 13TH.

   FIVE YEAR REVISIONS HAVE BEEN COMPLETED FOR FEED GRAINS AND WHEAT.
   REVISIONS BACK TO 1968 HAVE BEEN COMPLETED FOR THE GENERAL ECONOMIC
   INDICATORS (NATIONAL ACCOUNTS).

  TELENET USERS, PLEASE REPORT ANY PROPLEMS (EG. LINE DROPS) TO THE
  TELENET SERVICE CENTER 800-336-0437.

   FOR FURTHER HELP CONTACT ED OVERTON OR FLETCHER MARTIN AT 202-447-8862.

COUNTRY.REPORT PROGRAMS

The following section contains brief descriptions of the functions of the various programs. Included with each is a list of the variables which must be defined before the program can be executed. Each program also defines or resets certain variables for use by subprograms or calling programs. These variables are also explained.

The following program requires quarterly updates:

MACRO

The following programs require yearly updates:

COREPORT
FORECAST
GRAINS
GRAINSAV
MACRO
MACROSAV

COUNTRY.REPORT
Program files in ERS75.ER3RM

ALLPROGS	- A SPEAKEASY namelist containing the following programs: GETCODE, GRAINS, MACRO, and TABLES.
BATCHPGM.CLIST	- A TSO prompting program to initiate batch execution.
BATCHRPT	- A batch version of the COREPORT program.
COREPORT	- The master program. It generates the prompting questions, defines variables, and calls the appropriate programs as needed.
COUNTRY.REPORT.CLIST	- A TSO program that allocates files and calls BATCHGM.CLIST for batch processing or the OASIS software for interactive use.
FORECAST	- A program which creates forecasts and graphs for selected grain data.
GETCODE	- A program that finds the OSF country code which corresponds to the IFS country code entered.
GRAINS	- A program that sets the appropriate TDAM parameters for OSFDATA and creates wheat, rice coarse grain, and total cereals supply/utilization tables.
GRAINSAV	- A program that sets the appropriate TDAM parameters for OSFDATA and creates one-dimensional SPEAKEASY arrays for wheat, rice coarse grain, and total cereals supply/utilization variables.
IFSDATA	- A program which gets the selected IFS variables from TDAM.
MACRO	- A program that sets the appropriate TDAM parameters for IFDATA and creates tables of selected annual and quarterly IFS variables.
MACROSAV	- A program that sets the appropriate TDAM parameters for IFSDATA and creates one-dimensional SPEAKEASY arrays for selected IFS variables.
NAMEFIND	- A program that takes user-entered IFS or OSF codes and finds their corresponding country names and OSF/IFS codes to create a SPEAKEASY CHECKPOINT file.
OSFDATA	- A program that gets the OSF variables from TDAM.
REGION1 through REGION10	- Data files containig coresponding IFS codes, country names, and FAS (in the "OSF" logical group) country codes.
TABLES	- A program to generate, if required, country IFS codes and matching names.

BATCHPGM.CLIST

A TSO prompting program which creates JCL for batch processing, and provides an option for creating a CHECKPOINT file of IFS codes and country names.

BATCHRPT

The batch version of COREPORT. It initializes variables and calls the other programs.

VARIABLES WHICH MUST BE DEFINED BEFORE EXECUTION:

BRANCH - Defines the type of output desired, allowing for proper program branching.

COUNTRY - N x 3 character array containing a list of IFS codes.

ID - OSF id required for grain data.

N - Number of countries.

NAME - N x 30 character array of country names corresponding to codes in COUNTRY.

PASSWD - OSF password required for grain data.

VARIABLES DEFINED IN THE PROGRAM:

ERROR - Error flag used by GETCODE to mark invalid IFS codes.

I - Loop index. Runs from 1 through N.

OSF - 1 x 2 character array. Will contain the OSF code being processed.

TERM - Defines terminal size for output. Set to "b" for batch.

TYPE - Set to 'either' when either type of forecast output is desired. Set to 'default' otherwise.

```

COREPORT

The main prompting program for interactive use. It requests the data necessary for execution of the remaining programs and initializes variables.

PERIODIC CHANGES REQUIRED: Three lines use the OSF id which is changed periodically.

VARIABLES DEFINED IN THE PROGRAM:

BRANCH - Defines the type of output desired, allowing for proper program branching.

COUNTRY - N x 3 character array containing a list of IFS codes.

ERROR - Error flag used by GETCODE to mark invalid IFS codes.

I - Loop index. Runs from 1 through N.

ID - OSF id required for grain data.

N - Number of countries.

NAME - N x 30 character array of country names corresponding to codes in COUNTRY.

OSF - 1 x 2 character array. Will contain OSF code being processed.

PASSWD - OSF password required for grain data.

TERM - Defines terminal size for output. Set to "s" for standard (155 characters/line) terminal or "m" for miniterm.

TYPE - Set to 'either' when BRANCH is set to either 'both' of 'fore'. Set to 'default' otherwise.

FORECAST

Creates forecasts and graphs for selected grain data. First determines whether the three time series are missing any data and must be truncated, then runs simple linear regressions on each series and the logarithms of each series. Five-year estimates are then made from the results and appended to each series. Finally, the data are graphed against time.

PERIODIC CHANGES REQUIRED: The variable LASTYR must be changed yearly to correspond with the last year of the time series.

VARIABLES WHICH MUST BE DEFINED BEFORE EXECUTION:

J

NSPR; SPREND
NNET; NETEND
NUDT; UDTEND

PEST; LPEST — Defined in GRAINS
NEST; LNEST
CEST; LCEST

RSQ; LRSQ

VARIABLES RETURNED BY THE PROGRAM:

SHRTPEST - Production five-year linear estimates.
SHRTNEST - Net imports five-year linear estimates.
SHRTCEST - Consumption five-year linear estimates.

LPEST - Production five-year logarithmic estimates.
LNEST - Net imports five-year logarithmic estimates.
LCEST - Consumption five-year logarithmic estimates.

NO - Three-element array containing the number of elements in each regression series (after truncation).

RSQ; LRSQ - R^2 values for linear and logarithmic regression runs.

GETCODE

Uses the first digit of an IFS code to determine which "region" contains the corresponding country name and OSF code, then uses the entire IFS code to find the exact row in which the correct data is stored. The corresponding OSF code is placed in the variable OSF. GETCODE is also used by NAMEFIND to retreive country names when creating a CHECKPOINT file.

VARIABLES WHICH MUST BE DEFINED BEFORE EXECUTION:

COUNTRY I N NAME	Defined in COREPORT or BATCHRPT

VARIABLES DEFINED IN THE PROGRAM:

- OSF - 1 x 2 character array containing the OSF code corresponding to the IFS code being processed.
- OSFLOC - Index to the row in REGIONA where the codes and country name are found.
- REGIONA - Temporary object containing one of the 10 regions (REGION1 through REGION10).

GRAINS

Program to retrieve and tabulate grain data. Sets up headings and initiates variables for OSFDATA or FORECAST. Tabulates results.

PERIODIC CHANGES REQUIRED: The variables TDIP, TDLP, YEAR, and HEADER must be updated yearly as the database is updated.

VARIABLES WHICH MUST BE DEFINED BEFORE EXECUTION:

BRANCH
COUNTRY
I
ID
N — Defined in COREPORT or BATCHRPT
NAME
OSF
PASSWD
TERM
TYPE

VARIABLES DEFINED IN THE PROGRAM:

J - Loop index. Runs from 1 through 4 (once for each grain).

LGF - TDAM logical-group frequency. Set to "a" for annual, "q" for quarterly.

NSPR - Production data for FORECAST.
NNET - Net import data for FORECAST.
NVDT - Consumption data for FORECAST.

PEST - Array to contain production forecasts.
NEST - Array to contain net imports forecasts.
CEST - Array to contain consumption forecasts.

RSQ; LRSQ - Arrays which will contain R^2 values from regressions.

TDIP
TDLP - TDAM variables containing the first and last periods in the time series to be retrieved.

```

GRAINSAV

Similar in function to GRAINS, but does not free or overwrite data after tabulation, thus saving it for operator use.

PERIODIC CHANGES REQUIRED: The variables TDIP, TDLP, and YEAR must be updated yearly as the database is updated.

VARIABLES WHICH MUST BE DEFINED BEFORE EXECUTION:

ID
OSF — Defined in COREPORT
PASSWD

VARIABLES DEFINED IN THE PROGRAM:

LGF - TDAM logical-group frequency. Set to "a" for annual, "q" for quarterly.

TDIP - TDAM variables containing the first and last periods in the
TDLP time series to be retrieved.

In addition, variables containing the time series data for each grain are created. The prefixes "WH", "RI", "CG", and "TC" are appended to the variable names to identify the grain data they contain. For example, "WHPROD" contains wheat production figures and "RIPROD" contains rice production figures.

Prefixes:
- WH - wheat
- RI - Rice
- CG - Coarse Grain
- TC - Total Cereal

Suffixes:
- AHARV - Area Harvest (1000 Hectares)
- YIELD - Yield (Metric tons/hectare)
- BSTOCK - Beginning Stocks
- PROD - Production
- DFEED - Domestic Feed Use
- CONS - Domestic Consumption
- FYUS - Fiscal Year (July-June) Imports from the U.S.
- FYIMP - Fiscal Year Imports (Total)
- FYEXP - Fiscal Year Exports (Total)

IFSDATA

Creates TDAM codes from the IFS codes, then uses the TDAM GET procedure to retrieve macroeconomic data from the TDAM logical group IFS. Also retrieves units for tabular headings.

VARIABLES WHICH MUST BE DEFINED BEFORE EXECUTION:

COUNTRY	Defined in COREPORT
NUMWKS	
SDRRATE	
TDIP	Defined in MACRO or MACROSAV
TDLP	
TDLGF	
UNITS	

VARIABLES RETURNED BY THE PROGRAM:

The various macroeconomic variables and their units are self-explanitory. See the program and MACRO or MACROSAV.

MACRO

Calls IFSDATA and prints out macroeconomic tables.

PERIODIC CHANGES REQUIRED: The variables TDIP, TDLP, YEAR, and SDRRATE must be updated quarterly and yearly as the database is updated.

VARIABLES WHICH MUST BE DEFINED BEFORE EXECUTION:

NAME — Defined in COREPORT or BATCHRPT
TERM

VARIABLES DEFINED IN THE PROGRAM:

NUMWKS - Multiplier for determining weeks of import coverage. Set to 52 for annual, 13 for quarterly.

SDRRATE - Dollar/SDR conversion rate from International Financial Statistics.

TDLGF - Character array containing the TDAM logical group (IFS) and frequency ("a" for annual, "q" for quarterly).

TDIP, TDLP - TDAM parameters containing the first and last periods in the time series to be retrieved.

```

MACROSAV

Similar in function to MACRO, but does not free or overwrite data after tabulation, thus saving it for operator use.

PERIODIC CHANGES REQUIRED: The variables TDIP, TDLP, and YEAR must be updated yearly as the database is updated.

VARIABLES WHICH MUST BE DEFINED BEFORE EXECUTION:

COUNTRY Defined in COREPORT or BATCHRPT

VARIABLES DEFINED IN THE PROGRAM:

TDLGF - Character array containing the TDAM logical group (IFS) and frequency ("a" for annual, "q" for quarterly).

TDIP - TDAM parameters containing the first and last periods in the time series to be retrieved.

IMPORTS - Imports
EXPORTS - Exports
CURACCT - Balance on Current Account
RESERVES - International Reserves
EXRATE1 - Exchange Rate, Local Currency/$, End of Period
EXRATE2 - Exchange Rate, $/Local Currency, End of Period
CPI - Consumer Price Index
WPI - Wholesale Price Index
PCE - Private Consumption Expenditures (Index number)
INDPROD - Industrial Production (Index number)
GDP - Gross Domestic Product
GNP - Gross National Product
POP - Population

Units are specified on output.

NAMEFIND

Used in the batch mode to help create a CHECKPOINT file. Calls GETCODE to search through the various REGIONS to match IFS or OASIS codes with country/region names.

VARIABLES WHICH MUST BE DEFINED BEFORE EXECUTION:

CODEAR - Character literal array of IFS or OASIS codes.

COUNTRY - N x 3 character array containing a list of IFS codes.

KK - Array of integers from 5 through 34

LL - Array of integers from 1 through 3

NAME - N x 30 character array of country namkes corresponding to codes in COUNTRY.

VARIABLES RETURNED BY THE PROGRAM:

The IFS codes for the countries desired are placed into COUNTRY. The matching country names are placed in NAME.

COUNTRY.REPORT

IFS Codes by Region

REGIONS

REGION1 through REGION10 are text objects stored separately on REPORT. Columns 1-3 contain the IFS codes. Some of these are created for the program by combining a digit (corresponding to the proper region) and the OSF code. Columns 5-34 contain the country names. Columns 35-36 contain the OSF codes. Columns 73-80 contain editor-generated line numbers.
